Example – snack maker

Architecture summary · 30 October 2026

2	5	5	3	5	3
Goals	Activities	Teams	Information	Systems	Technology

£1.8m	£1.8m	£250k	£25k
a year today	a year in future	one-off costs	saved a year

The planned changes save £25k a year. With £250k of one-off costs, they pay for themselves in about 10 years.

Planned: Customer ordering website. Being removed: Order spreadsheet.

6 stakeholders: 2 for the changes, 2 unsure, 1 against, and 1 not known yet.

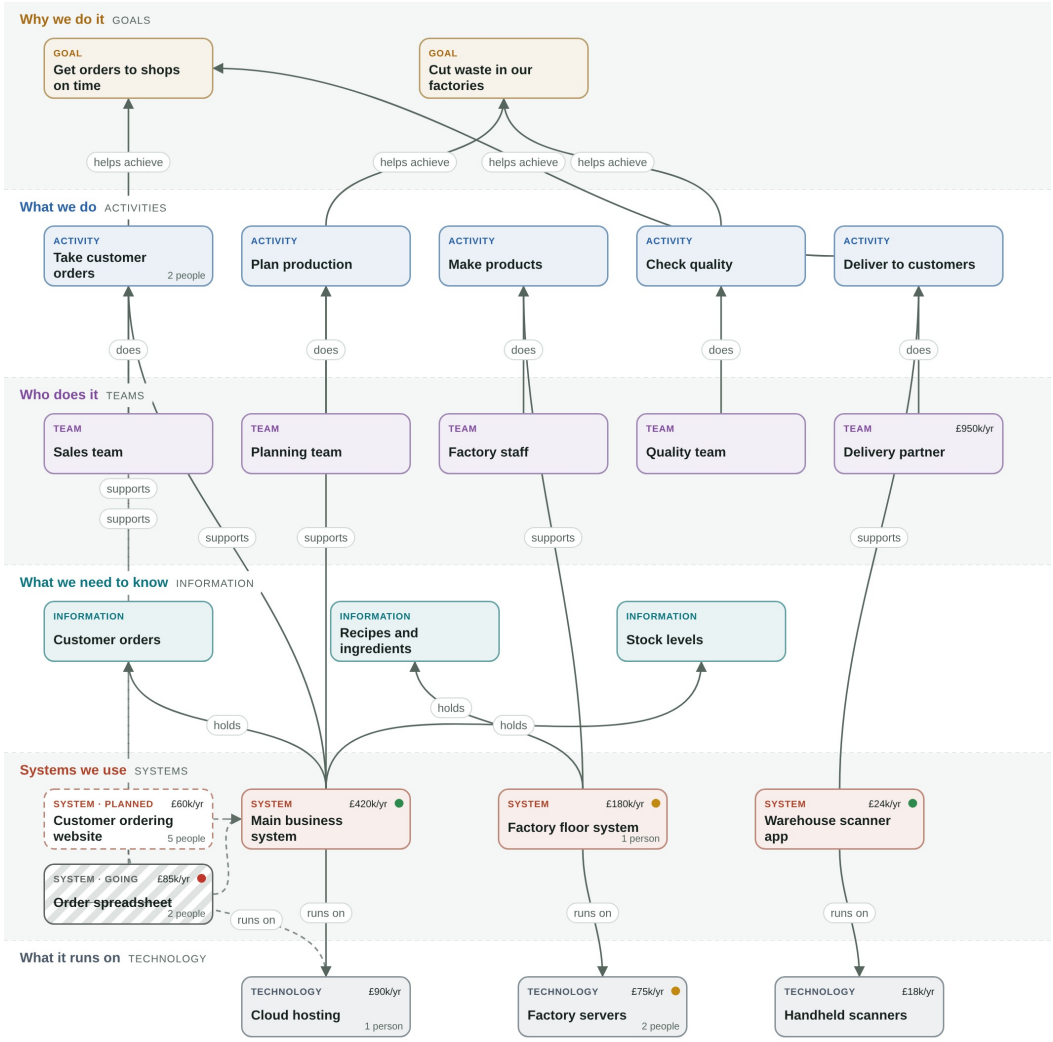

Things to look at: 2 serious, 1 worth checking, and 0 to note. They are listed later in this report.

Contents: the map, stakeholders, costs, things to look at, and everything on the map.

The map

Stakeholders

Example – snack maker: stakeholders

Higher up means more say. Further right means the changes affect them more. 30 October 2026

Made with Blockplan

Stakeholders in detail

Grouped by how closely to work with them.

Name	Role	Feeling	How to work with them	What they care about	How we keep them on side	Cares about on the map
Head of Sales	Sales	For the changes	Work closely with them	Large customers getting the right orders without phoning in.	Fortnightly catch-up while the ordering website is built.	Customer ordering website, Order spreadsheet, Take customer orders
Largest shop customers	Customers	For the changes	Work closely with them	Ordering at any time of day without ringing the sales team.	Invite two of them to try the website before it goes live.	Customer ordering website, Take customer orders
Finance Director	Finance	Against	Keep them satisfied	The one-off cost of the ordering website, and how soon it pays back.	No plan yet	Customer ordering website
Factory managers	Production	Don't know yet	Keep them satisfied	Keeping the lines running while the servers are replaced.	No plan yet	Factory floor system, Factory servers
Sales team	Sales staff	Unsure	Keep them informed	Losing the order spreadsheet they know well, and having to learn something new.	No plan yet	Order spreadsheet, Customer ordering website
IT support	IT	Unsure	Keep them informed	Another system to look after, and the ageing factory servers.	No plan yet	Customer ordering website, Cloud hosting, Factory servers

Costs

Yearly running costs, today and after the planned changes. Amounts in £.

Row	Today, a year	Future, a year	Change
Who does it	£950,000	£950,000	£0
Systems we use	£709,000	£684,000	-£25,000
What it runs on	£183,000	£183,000	£0
Total	**£1,842,000**	**£1,817,000**	**-£25,000**

Biggest costs	Kind	Status	Yearly	One-off
Delivery partner	Team	In place today	£950,000	
Main business system	System	In place today	£420,000	
Factory floor system	System	In place today	£180,000	
Cloud hosting	Technology	In place today	£90,000	
Order spreadsheet	System	Being removed	£85,000	
Factory servers	Technology	In place today	£75,000	
Customer ordering website	System	Planned	£60,000	£250,000
Warehouse scanner app	System	In place today	£24,000	
Handheld scanners	Technology	In place today	£18,000	

Things to look at

Simple checks on the map. Serious ones first.

	What we found	What to do
Serious	“Order spreadsheet” is causing problems	Note what is wrong in its description, and think about whether it should be fixed, replaced or removed.
Serious	“Finance Director” has a lot of say and is against the changes	Talk to them early about what worries them, and note in their plan how you will address it.
Worth checking	2 systems support “Take customer orders”	Main business system, Customer ordering website. They may overlap. Could one do the job?

Everything on the map

Grouped by row.

Name	What it is	Who looks after it	Status	Health	Yearly	One-off
Why we do it – Goals						
Cut waste in our factories			In place today			
Get orders to shops on time	Customers get the right products on the promised day.		In place today			
What we do – Activities						
Check quality			In place today
